for viewing external screen does anyone know if ubuntu can do a win7 dual boot with win7 ui and ubuntu inside like what win7 is already doing !dualboot | penguin penguin: Dual boot instructions: x86/AMD64: - Macs: thanks alimj, theres a bunch of documentation on the website (or google for android docs) penguin, you might have to do some work to make this happen. just dual booting windows 7 would be easy Can I import a file from a proprietary application that is not capable of exporting the file without a third party software? rallypoint, to which file? rallypoint, ask the third party software's vendor? I want to import a file to a microsoft word document. rallypoint, if that is the case, why did you ask what sort of file it is? Because I can open that file by notepad. the file is an asp page which can be opened in word but when I tried to upload it to a server, it is telling me that I can only do so if I use word software. Is there a way around it? oh, well, I don't know about that you can't just wget the page, correct? nevermind rallypoint, in case it helps I'm sorry, I got it mixed up rallypoint, 82157476af
